WIND SURFING

GA SAILS

PETER MUNZLINGER - GA HEAD DESIGNER

Decades of innovation, experience and passion for details lead GA Sails to world titles and most importantly satisfied windsurfers all over the world.

A team of world-class riders works closely together with our sail designer Peter Munzlinger and test our sails, masts and all accessories on and off the water extensively.

Our development team lives for the sport and this reflects in their enthusiasm to bring each sail size, batten specification and feature to perfection in all conditions around the globe.

Peter Munzlinger contributes his competitive experience and expert knowledge to each sail from our collection, which allows us to maintain Gaastra's tradition of innovative ideas and high quality products and to establish a new era of windsurfing sails.

IQ ME

NEW

NEWSCHOOL WAVE

The IQ-ME brings neutrality, lightness and smooth power generation to another level, which sparks waveriders in a huge range of conditions. Adding a membrane construction to our impressively performing IQ meant, we needed to come up with a special design to stand out. Our development team integrated a continuous panel construction with no interruption of the fibers through shaping seams.

Continuous panels for the foot, centre, luff and leech of the sail prevent interruptions of the Technora fibers for a perfect flow of the load across the sail's profile, which leads to an inimitably smooth feeling and unmatched lightness of the IQ-ME.

The introduction of the IQ-ME 3.6 and 5.6 allow you to enjoy its unique feeling in a broader range of conditions.

Once you had the IQ-ME in your hands for the first time, you never want to miss its inimitably smooth power generation and neutral on-off characteristics again.

2023 FEATURES

- **TECHNORA FIBRE CONSTRUCTION:** Super low stretch Technora fibers of the highest quality run along the whole path of the load, which provides a smooth feeling.
- **LIGHT-WEIGHT STRUCTURE:** Technora fibers allow processing of thinner film, which leads to a significantly lighter sail.
- **CONTINUOUS PANEL LAYOUT:** 4 Panels with continuous fibre flow without interruption through seams.
- **COMPACT WINDOW DESIGN:** A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- **HD SAIL WINDOW:** X-Ply in the sail window make the sail extremely resistant in hardcore conditions.

IQ HD

NEW

NEWSCHOOL WAVE

Unmatched neutrality, great handling and versatility make the IQ-HD the sail of choice for wave riders, who aim for radical turns and cutbacks in a wide range of conditions.

A refined shape with a little flatter profile of the bigger sizes moves draft further back, which leads to less front hand pull and a lighter feeling of the board. By lowering the clew position slightly, we achieved even better control in strong winds, especially on the smaller sizes with lighter and less physical handling.

Two continuous luff panels ensure strong and extremely efficient load distribution, which leads to smoothly generating power and drive. All sizes feature a new one-piece mast sleeve that is lighter and leads to optimized stretch.

These traits get you on waves easily in a big range of conditions and that's where the IQ-HD unfolds its inimitably light feeling and neutrality.

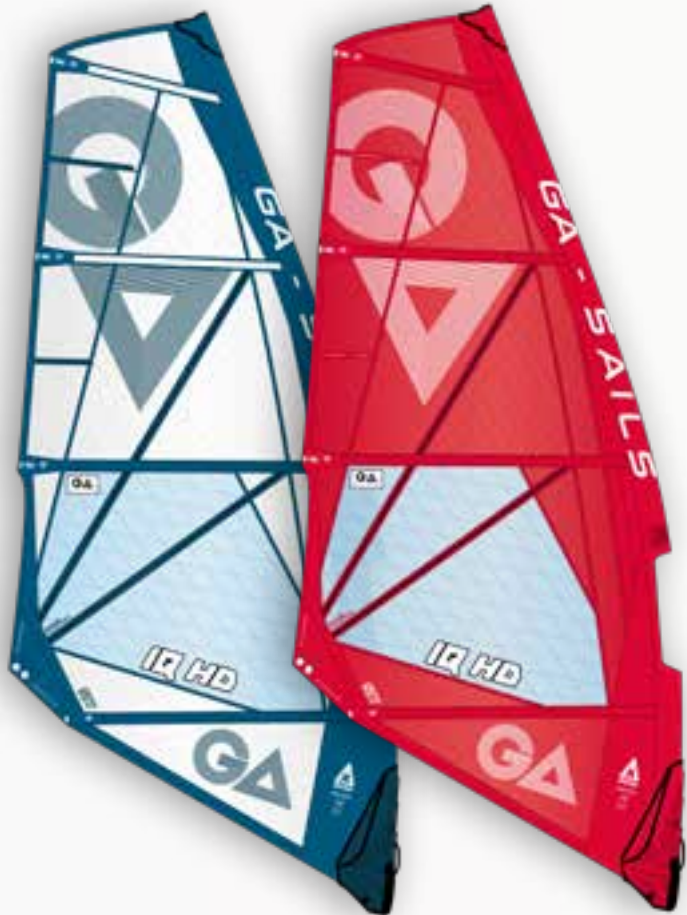

2023 FEATURES

- **ONE-PIECE MAST SLEEVE:** The one-piece mast sleeve makes the IQ-HD lighter and improves stretch characteristics.
- **CARBON RADIAL LOAD TAPES:** Carbon tapes spread from the clew across the center of the sail for a stable profile.
- **EXTRA LIGHT AND DURABLE 2-PLY:** 1.75 mil 2-Ply in the center and 2.5 mil at the leech provide perfect combination of lightness and durability.
- **4 BATTENS ON ALL SIZES:** Lightness paired with profile stability in all sizes.
- **CONTINUOUS LUFF PANELS:** Two continuous luff panels ensure a strong and efficient load distribution.
- **COMPACT WINDOW DESIGN:** A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- **HD SAIL WINDOW:** X-Ply in the sail window make the sail extremely resistant in hardcore conditions.
- **INTEGRATED BATTEN TECHNOLOGY:** All battens above the boom are integrated into the overlapping panels for maximized symmetry and stability.

MANIC | MANIC HD

HARD CORE WAVE

The Manic's inimitable combination of controllability, power and handling will fascinate you both when blasting down the line in side-off conditions and during onshore sessions in gusty winds and small waves.

Planing performance and responsive handling are guaranteed throughout the whole spectrum with the bigger sizes providing increased power in light winds and the small sizes maximizing control in stormy weather.

The newly introduced one-piece mast sleeve enhances the Manic's lightness and optimizes stretch for a precise shape and flex characteristics. Refined positioning of the four battens in all sizes leads to an advanced combination of profile stability and soft on-off handling during wave rides.

The new Manic feels more neutral than ever before, but still provides great power and control for wave windsurfing in all conditions.

2023 FEATURES

- ONE-PIECE MAST SLEEVE: The one-piece mast sleeve makes the Manic lighter and improves stretch characteristics.
- CARBON RADIAL LOAD TAPES: Carbon tapes spread from the clew across the center of the sail for a stable profile.
- EXTRA LIGHT AND DURABLE 2-PLY: 1.75 mil 2-Ply in the center and 2.5 mil at the leech provide perfect combination of lightness and durability.
- 4 BATTENS ON ALL SIZES: Lightness paired with profile stability in all sizes.
- CONTINUOUS LUFF PANELS: Two continuous luff panels ensure a strong and efficient load distribution.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- INTEGRATED BATTEN TECHNOLOGY: All battens above the boom are integrated into the overlapping panels for maximized symmetry and stability.
- MANIC HD : X-Ply in the sail window make the sail extremely resistant in hardcore conditions.

PURE

RADICAL FREESTYLE

The Pure unlocks freestyle windsurfing's full potential and helps you defy gravity during the most radical rotations.

A newly introduced 2-Ply construction provides a uniquely direct feeling in moves with loads of control and power, while maintaining a light and durable structure.

Ducking the Pure and loading up power for the next move is easier and more controllable than ever before, which boosts your progression in freestyle windsurfing. A new one-piece mast sleeve leads to enhanced lightness and stretch for a precise shape and flex characteristics.

The Pure is designed for raw power to provide maximum pop, which translates into neutrality in the air during rotations.

Know no limits and unfold your creativity in freestyle windsurfing with the most neutral and powerful Pure, we ever designed.

2023 FEATURES

- EXTRA LIGHT AND DURABLE 2-PLY: The 2-Ply construction provides the perfect combination of lightness, control and power.
- ONE-PIECE MAST SLEEVE: The one-piece mast sleeve makes the Pure lighter and improves stretch characteristics.
- 4 BATTENS ON ALL SIZES: Lightness paired with profile stability in all sizes.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- INTEGRATED BATTEN TECHNOLOGY: All battens above the boom are integrated into the overlapping panels for maximized symmetry and stability
- DACRON LUFF PANEL: A Dacron panel next to the mast sleeve allows the Pure to load up tons of power for maximum pop.
- BACK TO NEUTRAL DESIGN: The Pure's design provides a neutral feeling in your hands especially during maneuvers.

PILOT

ALLROUND

The Pilot is a dedicated freeride sail design for riders, who look for the perfect blend of performance, high quality and a maximum value.

Everybody, who enjoys a smooth freeride session or is making his first steps into the foot straps will love the Pilot. The relaxed luff curve improves compatibility with nearly any mast brand, making the Pilot an economical sail for families.

Super smooth batten rotation, progressive pull and the backhanded profile offer enough power to move and maneuver even heavier older boards. Moderate tension already leads to the perfect trim, which makes rigging of the Pilot extremely convenient.

The lightweight construction of the Pilot makes it suitable for everybody, who wants to enjoy a smooth windsurfing session.

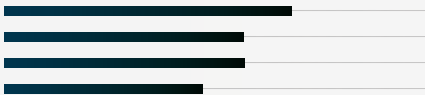

2023 FEATURES

- 4 BATTENS ON ALL SIZES: Lightness paired with profile stability in all sizes.
- DACRON LUFF PANEL: A Dacron panel next to the mast sleeve allows the Pilot to power up smoothly.
- TOLERANT LUFF CURVE: The luff curve of the Pilot is designed to make the sail work with masts of almost any manufacturer.
- EASY RIGGING: Reduced tractive forces make rigging the Pilot extremely easy and comfortable.
- EXTREMELY LIGHT CONSTRUCTION: An extremely light construction makes the Pilot the perfect choice for the whole family.

HYBRID | HYBRID HD

NEW

ULTIMATE FREERIDE - ALLROUND

One sail line for all circumstances - the Hybrid adjusts to your requirements and provides agility, control and power in waves as well as bump&jump or flatwater conditions.

The Hybrid evolves from an all-round wave sail in the smaller sizes across a versatile freemove line from 5.2 to 6.4 into an easy to use and powerful freeride sail in the biggest sizes.

All sizes feature a new one-piece mast sleeve, which is lighter and leads to optimized stretch. Updated sail shaping on the 5.2 and bigger moves draft slightly forward, which maximizes controllability.

The Hybrid is lighter than ever before and its super smooth profile pulls you forward with the right amount of backhand to easily manage the power.

Depending on the size you choose, the Hybrid provides exactly the right characteristics for you to enjoy your wave, bump&jump or freeride session.

2023 FEATURES

- ONE SAIL LINE FOR ALL CONDITIONS: With a quiver of Hybrid sails you can cover all conditions from wave sailing to bump&jump and freeriding.
- ONE-PIECE MAST SLEEVE: The one-piece mast sleeve makes the Hybrid lighter and improves stretch characteristics.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- HD SAIL WINDOW: X-Ply in the sail window of the Hybrid 6.4 and smaller make the sail extremely resistant in hardcore conditions.
- DACRON LUFF PANEL: A Dacron panel next to the mast sleeve allows the Hybrid to power up smoothly.
- MODERATE TENSION PROFILE: Moderate tension already leads to the perfect trim, which makes rigging of the Hybrid extremely convenient.
- AVAILABLE IN COMPLETE RIG

MATRIX

NEW

NO - CAM FREERACE

There is no need for cambers, when you're aiming for pure performance and maximum speed - the Matrix combines a locked-in racing feeling with ease of use.

The outline of the Matrix is based on our slalom sails with a small sail head and refined batten positioning, which leads to powerful yet extremely controllable drive. Updated sail shaping and a refined luff curve provide maximum control and performance in a massive wind range.

A newly introduced one-piece mast sleeve increases lightness and improves stretch characteristics. The Matrix reaches levels of acceleration and top speed similar to a cambered sail, while it remains incredibly stable and light in your hands, even in strong gusts.

Freerace performance has never been as accessible as with the Matrix - a no-cam sail that combines speed and ease of use to perfection.

2023 FEATURES

- NO-CAM PERFORMANCE DESIGN: Performance of a race-oriented sail paired with ease of use and smooth batten rotation of a no-cam construction
- ONE-PIECE MAST SLEEVE: The one-piece mast sleeve makes the Matrix lighter and improves stretch characteristics.
- CONTINUOUS LUFF PANELS: Continuous luff panels ensure a strong and efficient load distribution.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- DACRON LUFF PANEL: A Dacron panel next to the mast sleeve allows the Matrix to power up smoothly.
- MODERATE TENSION PROFILE: Moderate tension already leads to the perfect trim, which makes rigging of the Matrix extremely convenient.

COSMIC

NEW

TWO - CAM FREERACE

The Cosmic combines the low-end power and performance of a cambered sail with the user-friendliness and comfort in jibes, usually only no-cam designs can provide.

All sizes feature seven battens and two smoothly rotating small cams, which form a powerful profile that enables you to start planing incredibly early and in extremely light winds. The race-oriented outline with a wide sail foot and continuous luff panels provide precise load distribution and overall performance in a huge wind range.

While the Cosmic sparks your urge to go faster more than ever before, it is still extremely convenient to rig and the rotation of the battens during jibes will fascinate you.

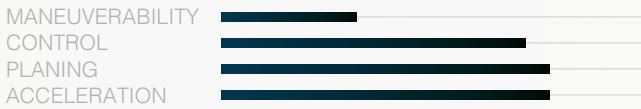

If you look for increased performance, but don't want to pass on user-friendliness, the Cosmic is the perfect sail to accelerate your windsurfing session.

2023 FEATURES

- DUAL-MINI-CAM PERFORMANCE DESIGN: Performance of a race-oriented sail paired with two small cambers for ease of use and smooth batten rotation.
- CROSS BATTEN CONCEPT: The cross batten provides perfect stability in the profile of the Cosmic and a fixed centre of pressure.
- CONTINUOUS LUFF PANELS: Continuous luff panels ensure a strong and efficient load distribution.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- MODERATE TENSION PROFILE: Moderate tension already leads to the perfect trim, which makes rigging of the Cosmic extremely convenient.

NEW

AIR RIDE

F R E E R I D E F O I L

Foiling enthusiasts will admire the Air Ride, which combines the benefits of a high aspect design with outstanding lightness and maneuverability. A cleverly designed panel layout eliminates unnecessary seams, which leads to reduced weight and increased durability. The Dacron luff panel provides perfect load distribution and easy to handle power generation in light winds.

Smooth batten rotation, maximum control and increased performance were achieved by refining the Air Ride's luff curve and implementing a one-piece mast sleeve, which enhances lightness and optimizes stretch.

The high aspect design increases efficiency and low-end power, which allows you to take-off incredibly early. Easy handling, controllability and abalanced feeling motivate you to accelerate and fly above the water surface at high speed.

The Air Ride is the right choice for windsurf foiling at all skill levels with its mix of easy-to-use characteristics and incredible performance potential.

2023 FEATURES

- ONE-PIECE MAST SLEEVE: The one-piece mast sleeve makes the Air Ride lighter and improves stretch characteristics.
- REFINED LUFF CURVE: A refined luff curve leads to enhanced control and performance.
- COMPACT WINDOW DESIGN: A compact sail window provides great visibility, while eliminating unnecessary seams and reducing weight.
- DACRON LUFF PANEL: A Dacron panel next to the mast sleeve allows the Air Ride to power up smoothly.
- MODERATE TENSION PROFILE: Moderate tension already leads to the perfect trim, which makes rigging of the Air Ride extremely convenient.
- HIGH ASPECT DESIGN: Foil specific high aspect design leads to superb efficiency and low-end power.

GA AIR RIDE | TABOU AIR RIDE

PHANTOM

NEW

F R E E R A C E P E R F O R M A N C E

The Phantom is ready to compete with pure slalom sails without demanding too much from the rider - the perfect choice for the upcoming generation of racers.

We designed the Phantom with our new 3D software, which allows us to maximize precision in the sail's profile and optimize draft and twist characteristics.

An updated sizing structure provides the perfect sail for all conditions on the racing course with an overall compact sail range. Sharing most characteristics with the Vapor reflects in the Phantom's outstanding performance, while a narrower mast sleeve and the 2 + 1 camber setup makes it easier to rig and handle.

The updated outline, twist pattern and aspect ratio is optimized for maximum fin slalom performance and control.

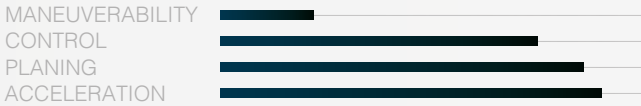

No-compromise slalom racing performance is more accessible than ever before with the brand-new 2023 Phantom !

2023 FEATURES

- 3-CAM PERFORMANCE DESIGN: Two race cambers are combined with one small camber for a perfect mix between no-compromise performance and user-friendliness.
- CROSS BATTEN CONCEPT: The cross batten provides perfect stability in the profile of the Phantom and a fixed centre of pressure.
- CONTINUOUS LUFF PANELS:Continuous luff panels ensure a strong and efficient load distribution.
- HIGH TENSION PROFILE: High tension in the Phantom's profile provides controllability and profile stability in extreme racing conditions.
- VAPOR RACING DESIGN: The Phantom's design is based on the professional slalom racing sail Vapor, which guarantees impressive racing performance.

PHANTOM AIR

NEW

F O I L F R E E R A C E P E R F O R M A N C E

With the Phantom Air pure foil racing performance becomes more accessible and convenient than ever before.

Designing the Phantom Air with our new 3D software allows us to maximize precision in the sail's profile and optimize draft and twist characteristics.

A new compact sizing structure provides the perfect sail for all conditions, you might face on the racing course. The Phantom Air shares important features with the Vapor Air foil racing collection, which finds expression in its prime performance.

An updated outline, twist pattern and aspect ratio leads to maximum control and performance on foil slalom courses.

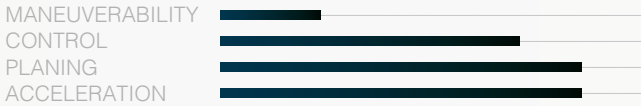

The Phantom Air's huge performance potential remains accessible to amateur racers and the upcoming generation of foil racers thanks to modifications like the 2 + 1 camber configuration and a moderately wide mast sleeve.

2023 FEATURES

- 3-CAM PERFORMANCE DESIGN:Two race cambers are combined with one small camber for a perfect mix between no-compromise performance and user-friendliness.
- CROSS BATTEN CONCEPT: The cross batten provides perfect stability in the profile of the Phantom Air and a fixed centre of pressure.
- CONTINUOUS LUFF PANELS: Continuous luff panels ensure a strong and efficient load distribution.
- HIGH TENSION PROFILE: High tension in the Phantom Air's profile provides controllability and profile stability in extreme racing conditions.
- VAPOR AIR RACING DESIGN: The Phantom Air's design is based on the professional foil racing sail Vapor Air, which guarantees impressive racing performance.

VAPOR^{NEW}

SLALOM RACING

The no-compromise racing performance of the brand-new 2023 Vapor makes you a podium contender in every slalom competition. Our new 3D design software allows us to maximize precision in the Vapor's profile and optimize draft and twist characteristics. The new sizing structure provides the perfect sail for all conditions on the racing course with an overall compact sail range to easily comply with all racing regulations

A 7-batten configuration on all sizes and a simplified panel layout without unnecessary seams provide an incredibly light feeling in your hands. The Vapor's updated twist pattern, outline and aspect ratio lead to maximum control and performance during fin slalom races and in a huge wind range.

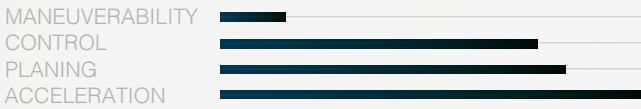

The 2023 Vapor provides power, controllability and speed for you to be the fastest at your local spot and win national as well as international racing competitions.

2023 FEATURES

- 4-CAM PERFORMANCE DESIGN: Four cambers on the small Vapor sizes and two race cambers with two small cambers on the bigger sizes enable the perfect mix between no-compromise performance and effortless batten rotation.
- CROSS BATTEN CONCEPT
- The cross batten provides perfect stability in the profile of the Vapor and a fixed centre of pressure.
- CONTINUOUS LUFF PANELS: Continuous luff panels ensure a strong and efficient load distribution.
- HIGH TENSION PROFILE: High tension in the Vapor's profile provides controllability and profile stability in extreme racing conditions.
- ADAPTABLE VAPOR QUIVER: All sizes from the new range are explicitly designed to match the corresponding board size in the respective conditions.

VAPOR AIR^{NEW}

FOIL SLALOM RACING

Accelerate in the lightest breeze and fly over the finish line in first place with the 2023 Vapor Air!

We designed the Vapor Air with our new 3D software, which allows us to maximize precision in the sail's profile and optimize twist and draft characteristics.

A new sizing structure provides the perfect sail size for all conditions on the racing course with an overall compact sail range to easily comply with all racing regulations.

The Vapor Air's incredibly light feeling in your hands is achieved by implementing a 7-batten configuration on all sizes and simplifying the panel layout. With its updated twist pattern, aspect ratio and outline the Vapor Air provides maximum control and performance on the foil racing course and in a huge wind range.

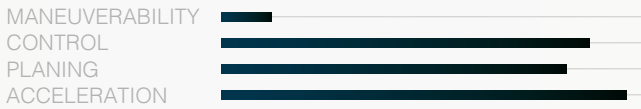

No compromises are made during the development of the Vapor Air collection, which allows you to unleash incredible performance while racing and flying at high speed.

2023 FEATURES

- 4-CAM PERFORMANCE DESIGN: Two race cambers are combined with two small cambers for a perfect mix between no-compromise performance and effortless batten rotation.
- CROSS BATTEN CONCEPT: The cross batten provides perfect stability in the profile of the Vapor Air and a fixed centre of pressure.
- CONTINUOUS LUFF PANELS: Continuous luff panels ensure a strong and efficient load distribution.
- HIGH TENSION PROFILE: High tension in the Vapor Air's profile provides controllability and profile stability in extreme racing conditions.
- MODIFIED VAPOR AIR QUIVER: A new range of sail sizes provides you with the perfect quiver for all conditions and racing competitions.

MASTS

GA TECHNOLOGIES

Using our exclusive **E.N.I.R. Technology** we were also able to reduce weight, improve mast response and maintain the strength and durability needed for our world champion team to take on the toughest conditions in the world. The GA Masts are tougher and long-lasting than ever before. The most significant changes will come in our RDM range.

With a slick black carbon finish the Masts are lighter and more responsive than previous years. Our construction layup has been refined to reduce weight and improve the overall flex characteristics of the masts across the complete range.

We believe, we have a mast to suit every level and budget. Unrivalled performance combined with our incredible 2022 sail range means there is no better rig to choose.

IPS - The **Invisible Polyamid Shield** is a mast shielding device on all SDM masts. An invisible barrier from a patented „Prepreg Force Tank“, takes durability and light weight to a new standard. The mast is sealed with a polyamid surface coating, making the mast 100% scratch and dent resistant.

The strength of these new, 100, 90, 70% series, masts has been tested at 45% stronger than our previous models. After continuous abuse, the masts look new, stay strong and perform without compromise.

100% CARBON RDM - SDM

Our GA racing team expects the best from our 100% SDM range. When every race counts, mast breakages or poor tuning will make the difference between a podium place or last place. Our 100% SDM delivers unrivaled acceleration and reflex timing that will keep you moving faster and faster! Top of the line carbon fiber is used and no expense is spared for the GA 100% Race. A proven title winner the GA SDM is the best in its class.

The GA 100% RDM mast range is lighter and stronger than ever before. These masts must withstand the forces of mother nature and continue to do so as the GA Team pushes them to the limits! Built with the highest quality carbon fiber and cutting-edge technology the GA 100% RDM delivers ultimate performance time and time again.

80% CARBON RDM - SDM

Produced with the same technology as the GA 100, the 80 SDM has just about the same performance characteristics as our 100 SDM, but with more durability for when conditions get tough. The perfect choice for those wanting top performance in a long-lasting durable mast.

The strength to weight ratio of the 80 RDM is unmatched and for 2023 the mast is as light as our previous 100% RDM. With performance as close as we could get to the 100 RDM the new mast is the perfect combination of durability and performance.

BOOMS

The GA boom range offers the right tool for every windsurfer out there! Not only pros will enjoy the high performance and stiffness of our GA Carbon range, but also kids, schools and every enthusiastic windsurfer can rely on the durability and quality of our Carbon and Aluminium ranges.

Last year's addition of the GA Slim Carbon Pro came like a bombshell, reducing fatigue in especially wave and freestyle rider's hands significantly and rounding out our range perfectly. We mainly focused on the Carbon booms' designs this year, as the products themselves were working and performing impressively during the last year of testing.

The GA Aluminium range remains one of the best lines on the windsurfing market with the right product for every level of windsurfer and all sorts of conditions. Choose the Black Line for the best performance, you can get from an aluminium boom, or get your kids a lightweight Foxx Boom with extra thin diameter, so they can make the most out of their sessions. GA has the right boom for each one of you.

SLIM CARBON PRO

WAVE - FREERIDE

The Slim Carbon Pro boom has been developed to offer the ultimate blend of rigidity, strength, comfort and weight for all riders, looking for a high performance boom.

Our refined GA Boom Head maximizes rigidity and prevents slippage, while the tweaked tail end ensures a longer boom life with great strength and durability.

The ultra-comfortable grooved EVA grip of GA is highest quality standard rounds out the GA Slim Carbon Pro Boom that will impress and inspire session after session.

RACE CARBON PRO

SLALOM - RACING

With the GA Race boom you'll be able to stay in full control of your racing engine without losing your power on long racing days. Its uncompromising construction makes the GA race extremely stiff and light, resulting in a direct feeling for the sail and control at all times.

In order to reduce the swing weight, which is one of the most important factors for jibing around the racecourse, we developed a monocoque molded tail with integrated pulleys, which also reduces the overall weight to a minimum and creates an ultra-stiff construction.

	180 - 230	200 - 260	220 - 280

GREEN LINE

ALLOY BOOM

All sizes of the GA Green Line are shaped in a different manner to get the best performance for your sail in each length.

The longer the boom gets, the wider the bend is, giving your rig the perfect balance and enough space to make a deep, powerful profile work smoothly.

With a double push-pin operating system strength and durability are guaranteed even in the roughest conditions.

The finishing touch is given by the GA boom grip that adds ultimate and direct feeling for your rig.

HARNESSES

G5 PRO

WAIST MOULDED HARNESS

The G5 PRO is designed for those of you who need the ultimate in back support and comfort. With the most back support in our range, the G5 PRO will cushion and support your back from top to bottom.

G5 ergonomics have improved even further, a carefully designed high support 3D moulded design ensures support for your back.

A refined kidney belt locks the harness in place and our Dual Strap adjustment system provides a final layer of support you can't beat. The perfect choice for anyone looking for no compromise comfort in a waist harness.

SIZES: S - Waist 72 cm | M - Waist 77 cm | L - Waist 82 cm | XL - Waist 87 cm
RPP* : 249 €

RIDER

SEAT HARNESS

The RIDER is our all-purpose seat harness designed for free-ride and free-race enthusiasts. It offers excellent comfort and support. Our 8-way strapping system make sure that all loads are distributed evenly around the harness for maximum comfort during long days on the water.

A medium hook height makes hooking in and out easy while still providing the leverage you need for performance sailing.

A great harness for those looking to move to a seat harness without losing the comfort advantage of a waist harness.

HYDROFOILS WINDSURF SETS

HYBRID

ALUMINIUM SET

The Hybrid Foil with Deep Tuttle adapter offers all-round performance and the freedom to customize the foil according to your individual requirements.

A smooth and extremely early take-off, control in the air and a lot of performance potential provide both novices and advanced foil riders with the right setup for their flight.

The 90cm CNC milled aluminum fuselage offers a great mix of stability, controllability and speed potential as well as compatibility with various front wings. Depending on your setup the Hybrid Windsurf Foil Set allows you to cruise in almost non-existent winds, but also to race in extremely high-wind conditions.

The 85cm aluminum mast with incredible lightness and rigidity makes the Hybrid Foil a cost-efficient foil set with enormous performance potential.

MACH 1

CARBON SET

Lift your foiling to the next level with the premium Mach1 Windsurf Foil Set. If you are looking for prime performance, agility and a top-class construction in one package, the Mach1 is the right choice for you.

An incredibly stiff and light 90cm carbon mast is pre-set with an integrated Deep Tuttle adapter for enhanced rigidity at the connection point to your board.

The 90cm CNC milled aluminum fuselage offers a great mix of stability, controllability and speed potential as well as compatibility with various front wings.

No matter if you're looking for maximum performance, lift or comfort, you can adjust the foil with a large assortment of tuning parts to achieve exactly the right setup for your demands and the conditions you're foiling in.

GTX

NEW

CARBON SET

The GTX Windsurf Foil Set sets a new standard in windsurf foiling performance.

A newly developed Carbon layout on these 87 & 97cm mast with a slimmer profile leads to increased stiffness, lightness and less drag, which results in outstanding speed, control and responsiveness.

The 90cm CNC milled aluminum fuselage of the standard setup offers a great mix of stability, controllability and speed potential as well as compatibility with various front wings.

Combine the GTX Wind Foil Set with one of our HP front wings to achieve a great mix of stability, controllability and performance or go for increased comfort with one of our FREE front wings.

PHANTOM

CARBON SET

Pure windsurf foiling performance is guaranteed with the Phantom Windsurf Foil Set, which combines raw speed and minimal drag with lift and control so that everybody can experience rapid foiling sessions.

The 90cm carbon mast provides rigidity and impressive lightness, which leads to direct control and superb performance.

Paired with the 110cm fuselage and either the R 650 or R 850 front wing the Phantom offers the right mix between lift, unmatched control on extreme upwind and downwind courses and outstanding top speed.

If you're aiming for radical speed foiling, you can adjust the Phantom Windsurf Foil Set with a 100cm fuselage for even more speed potential.

FOIL WINGS

FREE WINGS

FREERIDE

A selection of five different FREE front wings provides an incredibly comfortable and easy-to-use addition to our foil sets. Five sizes offer exactly the right front wing for each rider and foiling discipline.

The FREE range fascinates with its ease of use, quality and controllability for riders of all skill levels without lacking agility and performance.

All FREE front wings are compatible with the Hybrid, Mach1 and GTX foil sets.

HP WINGS

HIGH PERFORMANCE

Pair your GTX, Mach1 and Hybrid foil set with one of the four different HP front wings in order to achieve enhanced performance, speed potential and agility.

The medium aspect ratio results in agile riding characteristics and allows you to push your wing and windsurf foiling to the next level. Despite the huge performance potential the HP front wings still offer great controllability and lift for riders, who just start pushing their level in foiling. A huge speed range, easy take-offs and a great balance of stability and agility make the HP outstanding all round front wings.

FR WINGS

SLALOM RACING

The FR front wings offer an inimitable mix of speed and lift to provide you with outstanding windsurf foiling performance.

With the 850cm2 FR you get the perfect mix of lift, control and speed in lighter winds, while the 650cm2 boosts the speed potential and controllability in strong wind conditions to the max.

The fairly thin high aspect ratio design of the FR front wings pushes the speed potential of your foil setup in a big range of conditions.

TABOU

FABIEN VOLLENWEIDER - TABOU FOUNDER
& BOARD DESIGNER

Fabien is the mastermind behind Tabou Boards and founded the company himself in 1991. More than 30 years of experience in board design, his close contact to the test team and his open-minded approach to shaping allows him to come up with innovative solutions for windsurfing and foiling boards.

With a shaping room near his home in Marseille Fabien can produce, test and tune prototypes quickly, which brings along the opportunity to try a lot of different design ideas, before Tabou Boards go into production.

RIDER : THOMAS TRAVERSA
GA MANIC | TABOU DA CURVE

DA CURVE

H A R D C O R E W A V E

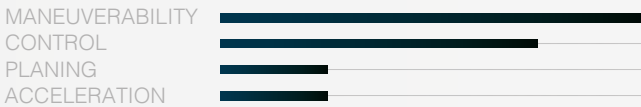

Radical cutbacks, tight turns and outstanding control are more accessible than ever before with the Da Curve. Its unique waveriding performance in perfect down-the-line conditions is well-known by windsurfers around the world, but the Da Curve also unfolds its immense agility in less than ideal waves and onshore winds. Especially the straighter rocker on bigger sizes adds incredible planing characteristics, which allow you to accelerate quickly and boost into huge jumps or catch waves in onshore conditions. The smaller models combine controllability and stellar manoeuvrability, which leads to radical waveriding and a uniquely loose feeling. The Da Curve is the waveriders choice and will fascinate you with its versatility !

2023 FEATURES

- **STRAIGHTER ROCKER ON 96 AND 88:** Enhanced planing performance for heavier riders and light-wind conditions.
- **MORE CURVATURE IN THE ROCKER OF 82 AND 76:** Those aiming for tight turns and lighter riders will benefit from the increased curvature on the 82 and 76
- **NARROW NOSE AND PINCH TAIL:** The outline with its narrow nose and pinch tail enables incredibly radical turning and looseness.
- **MEDIUM WAVERIDING WIDTH:** A medium width allows quick rail to rail riding.
- **MULTI CURVATURE CONCAVE:** More curvature near the rails adds impressive grip on the rail.
- **LOWER APEX RAILS:** Initiating turns becomes super easy, while also grip during turns is added.
- **DOUBLE DENSITY PADS:** Protection for you and your board in rough conditions and tough landings.
- **THRUSTER FIN SETUP:** Three slotboxes reduce the weight significantly.
- **6-HOLE FRONT INSIDE INSERT:** You can choose between more classic and new school stances thanks to the 6-hole front insert.

DA BOMB

NEW

N E W S C H O O L W A V E

The Da Bomb performs incredibly well in good conditions and impresses even more, when the wind turns onshore and the waves become less ideal. Fabien Vollenweider and our R&D team worked intensively on further enhancing the Da Bomb's waveriding capabilities, while never passing on drive and planing performance to get you through the shore break and into many waves. A more pintail outline, based on the bigger Da Curve models, increases the maneuverability and versatility of the Da Bomb. An asymmetric concave adds grip during turns, which allows you to easily and quickly adjust the radius of your turns at any time. This helps hitting the most critical sections especially in sloppy beach breaks. A more tense rocker with less kick maintains the planing capabilities, the Da Bomb is famous for, so that no wave remains unsurfed and you'll be able to launch into huge jumps. Unmatched versatility, superb drive and increased maneuverability allows you to enjoy your waveriding session at any spot and in all conditions.

2023 FEATURES

- **ASYMMETRIC CONCAVE:** An asymmetric concave adds grip and direct control during turns.
- **REDUCED KICK ROCKER:** The tense rocker line with less kick maximizes the planing performance.
- **MORE PINTAIL OUTLINE:** A more pintail outline increased the maneuverability and versatility.
- **DOUBLE DENSITY PADS:** Protection for you and your board in rough conditions and tough landings.
- **THRUSTER FIN SETUP:** An MFC thruster setup provides the perfect mix of speed and looseness.
- **6-HOLE FRONT INSIDE INSERT:** You can choose between more classic and new school stances thanks to the 6-hole front insert.

3 STYLES + NEW

ALL SEA - FREESTYLE WAVE

The 3S+ combines the best traits of our wave, freeride and freestyle boards to cover three styles of windsurfing in one board. A combination of a modern tail and a more classic outline in the nose leads to the perfect mix of early planing, speed and maneuverability in a huge range of conditions. Thin rails in the rail section allow you to initiate turns and jibes easily, which make the 3S+ a great choice for freeriding in strong winds and waveriding in onshore conditions and smaller waves.

Despite the impressive performance potential the 3S+ doesn't pass on great comfort and controllability due to the dome deck under the back foot, multiple foot strap positions and a V double concave hull shape.

For 2023 the 3S+ 116 was updated to the specs of the smaller sizes to achieve outstanding maneuverability and drive.

With the 3S+ three styles of windsurfing are combined in one board.

2023 FEATURES

- MODERN TAIL X CLASSIC NOSE: The combination of a modern tail and a more classic nose provides forgiveness and great carving characteristics.
- WINGER TAIL: A winger tail outline leads to great acceleration.
- V DOUBLE CONCAVE: Grip and forgiveness are achieved by the V double concave hull shape.
- DOME DECK: The dome deck under the back foot offers amazing comfort
- MULTIPLE STRAP INSERTS: Various insert positions provide you with the perfect foot strap setup both with 3 or 4 straps.
- NARROW TAIL OUTLINE: A narrower tail on the 96 and 106 maximizes top speed and looseness during turns.
- FLAT TAIL ROCKER: A flat tail rocker leads to earlier planing, great acceleration and more control on the 96 and 106.
- THIN RAIL TAIL: Thin rails in the tail allow you to easily initiate carves during jibes and wave turns.

3 STYLES

BUMP & JUMP

With the 3S Classic we celebrate this board's successful past and add modern characteristics, which results in outstanding all-round performance and ease of use.

The traditional, longer outline is combined with a very forgiving rocker, which gets you planing early and easily.

With its longer shape the 3S Classic offers magnificent control in chop as well as gusts and provides a huge wind range in combination with the impressive low-end planing potential.

Thanks to the double step cut-out in the tail section carving through jibes and even riding smaller waves becomes incredibly easy.

Multiple foot strap position options allow you to tune the board exactly to your demands with a centered setup for increased maneuverability and an outside position for maximum speed control.

Controllability, early planing and speed in a huge range of conditions are guaranteed with the 3S Classic.

2023 FEATURES

- DOUBLE STEP CUT-OUT: The double step cut-out in the tail leads to tighter turns and more speed.
- LONGER AND MORE CLASSIC SHAPE: A more traditional shape provides great control in choppy conditions.
- FORGIVING ROCKER: The rocker line of the 3S Classic is very forgiving, which leads to comfort in all conditions.
- ALL-WIND-PERFORMANCE: The 3S Classic provides control, early planing and speed in a huge wind range.
- EASE OF USE CONCEPT: More centered foot strap positions and the more traditional shape make riding the 3S Classic incredibly easy.

TWISTER

NEW

FREESTYLE

The Twister pushes the limits of freestyle windsurfing and motivates you to equally push your limits and learn new moves and combos. With its high entry rocker and a narrow section at the back foot the Twister's acceleration and top speed is maximized, which results in enormous pop to go for higher and more radical rotations. While the outstanding pop provides you with the airtime, you need for the latest power moves, the compact outline enables quicker and more controlled rotations.

For 2023 the Twister 103 was adapted to the latest updates of the 93 version, which provides the same levels of pure freestyle performance both to newcomers and hardcore freestyle windsurfers.

Boxy rails and a deep V bottom shape enable forgiveness during moves and controllability in different conditions, which helps you stick more moves than ever.

Jump onto the Twister and define the limits of gravity!

2023 FEATURES

- **SUPER COMPACT DESIGN:** The compact outline enables faster and more radical rotations.
- **HIGH ENTRY ROCKER:** A high entry rocker leads to unmatched top speed.
- **NARROWER TAIL UNDER THE BACK FOOT:** A narrower section at the back foot leads to huge pop and top speed.
- **DEEP V BOTTOM AND BOXY RAILS:** Boxy rails and a deep V bottom shape provide forgiveness during moves.
- **SMALL TAIL AREA:** The small area in the tail section enables maximum boost and pop.
- **HIGH SPEED SCOOP:** A scoop design based on the Manta 61 slalom board maximizes speed and acceleration.

BULLITT

ONE FOR ALL FREERIDERS

The Bullitt fascinates experienced freeride windsurfers with its easy-to-use planing power and helps less-experienced riders progress and transition to modern compact boards.

Our ever so popular Rocket freeride board with its smooth speed, controllability and easy jibing forms the foundation of the Bullitt's design. The optimized volume distribution and increased length provides early drive to start planing early and easily.

A large EVA pad offers safety and comfort during the first windsurfing sessions, while multiple foot strap positions allow you to get planing for the very first time and race across the local spot once you're fully hooked on windsurfing.

Each size is specifically designed for its particular field of use with the mid-sized boards featuring an optional centre fin and the 185 a daggerboard.

Both experienced and less experienced windsurfers will love the easy-to-use characteristics of the Bullitt.

2023 FEATURES

- **MTE CONSTRUCTION:** Best compromise between performance, durability and cost-efficiency.
- **CLASSIC DESIGN:** Early planing and impressive speed potential.
- **EVA PAD:** A large EVA pad provides comfort and safety.
- **MULTIPLE STRAP INSERTS:** Various insert positions provide you with comfort and control at all skill levels.
- **CENTER FIN OR DAGGERBOARDS:** The Bullitt 135, 145 and 155 are supplied with an optional center fin and the 185 with a daggerboard for great accessibility for beginners.
- **ENHANCED STABILITY:** Maximized stability makes the Bullitt super easy to ride and navigate on.

ROCKET

F R E E R I D E S P I R I T

The Rocket has provided countless freeride windsurfers with the session of a lifetime for more than 15 years thanks to its unmatched mix of versatility, performance and ease of use.

Early and easy planing as well as controllability, when the wind picks up and chop intensifies, is ensured by the Rocket's low entry rocker. The narrow tail section boosts the top speed and makes jibing incredibly easy together with the thin rails.

We implemented multiple foot strap positions in a unique angled configuration to supply beginners and advanced windsurfers with the same levels of comfort.

An elaborate mix of controllability in chop, user-friendliness and speed allows everyone to enjoy the Rocket in a wide range of conditions. The Rocket is ready to accelerate your ride once again and for many years to come!

2023 FEATURES

- **LOW ENTRY ROCKER:** Early planing and great control are guaranteed by the low entry rocker line.
- **NARROW TAIL:** A narrow outline in the tail section boosts your top speed and facilitates jibing.
- **THIN RAIL SHAPE:** With thin rails in the tail initiating jibes becomes incredibly easy.
- **MULTIPLE STRAP INSERTS:** Various insert positions provide you with comfort and control at all skill levels.
- **EXTRA V UNDER MAST TRACK:** An extra V under the mast track of the 125 and 135 make going upwind and riding over chop super easy.
- **TOP SPEED CUT-OUTS:** Cut-outs in the tail of the 125 and 135 maximize top speed and acceleration.

ROCKET+

P E R F O R M A N C E V E R S A T I L I Y

Peak performance and easy controllability are combined to perfection by the Rocket+, which makes breath-taking speed easy to handle.

A low entry rocker provides early planing power and controllability, while blasting at full speed in overpowered and choppy conditions. The front V double concave leads to impressive power generation, which converts into acceleration and top speed together with the reduced wetted surface as result of cut-outs in the tail section.

Due to the thin rails in the tail you can easily keep the speed through jibes and adjust the carving radius.

Multiple foot strap positions round out the versatility and performance potential for riders of all skill levels with an outside position for experts and a more centered position for intermediates.

With its relatively wide tail and a reinforced Deep Tuttle Box the Rocket+ allows you to enjoy the board's unique characteristics also with foils.

Enjoy the plus in performance in a huge range of conditions with the Rocket+.

2023 FEATURES

- **LOW ENTRY ROCKER:** Early planing and great control are guaranteed by the low entry rocker line.
- **FRONT V DOUBLE CONCAVE:** A front V double concave provides impressive power.
- **THIN RAIL SHAPE:** With thin rails in the tail carving jibes becomes incredibly easy.
- **MULTIPLE STRAP INSERTS:** Various insert positions provide you with comfort and control at all skill levels.
- **TOP SPEED CUT-OUTS:** Cut-outs in the tail maximize top speed and acceleration.
- **SUPER DEEP FRONT V ON 123 AND 133:** An extremely deep front V on the 123 and 133 leads to super smooth control in chop.
- **NEW CONCAVE ON 123 AND 133:** An updated concave shape on the 123 and 133 increases control and top speed.

FIFTY

NEW

50 % FOIL + 50 % FIN = 100 % PERFORMANCES

One single board will make you fly over the water both with a fin and a foil - the Fifty is ready to accelerate your freeracing sessions. The Fifty is the first board that from scratch has been equally designed for foiling and fin windsurfing and therefore provides the same levels of performance in both disciplines. A wide tail outline adds leverage for early lift-offs with a foil and enables enhanced control with a fin. Big tail cut-outs reduce the wetted surface, which results in amazing top speed with a fin and earlier lift with a foil. The Fifty's high entry rocker enables early take-offs as well as smooth touchdowns, when foiling and adds outstanding control, when windsurfing with a fin in rough waters. Each feature of the Fifty increases its performance as windsurfing and windsurf foiling board, so just switch to a fin, when the wind picks up or go for the foil setup, when it fades.

2023 FEATURES

- FOIL READY FINBOX: A reinforced Deep Tuttle Box provides durability and safety.
- HIGH ENTRY ROCKER: Early lift-offs and smooth touchdowns as well as control while windsurfing are enabled by the Fifty's high entry rocker.
- WIDE TAIL OUTLINE: Extra leverage with a foil and control with a fin is added by implementing a wide outline in the tail.
- BIG CUT-OUTS: Big cut-outs in the tail reduce the wetted surface, which results in impressive top speed and lift.
- CROSS SECTION DECK: Comfort when foiling and windsurfing is guaranteed with the cross section deck.
- POWER HULL SHAPE: A front V double concave to flat V in the tail lead to outstanding power generation
- MFC HF RIDE: The Fifty is supplied with the MFC HF Ride fin for a perfect mix of control and performance at high speed.

MANTA

PRO RACE

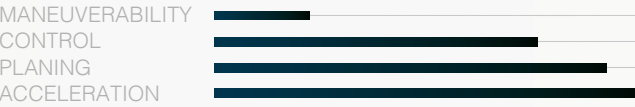

No matter what conditions you might face on the slalom course or at your local spot, the Manta will always make you fly at maximum velocity. Impressive acceleration, outstanding top speed and easy handling make the Manta the right choice for slalom racers and those aiming for highest speed at their local spot. Each size is specifically designed for the conditions that await you on different speed and slalom courses around the world. The Manta 48 and 54 are specifically designed for maximum velocity and provide outstanding control at an impressive top speed. The bigger the size you choose, the more focus lays on leverage and planing performance, while never passing on speed and controllability during jibes. Especially the Manta 71, 66 and 61 make sure that you are always in full control in choppy conditions and quickly accelerate to incredible top speed. Push the limits on the water and fly past other windsurfers and over the finish line in first place with the Manta.

2023 FEATURES

- BIG CUT-OUTS: Big cut-outs in the tail reduce the wetted surface, which results in impressive top speed and lift.
- VELOCITY ROCKER ON 61: A higher rocker and shorter flat section maximize the top speed of the Manta 61.
- SUPER DEEP FRONT V: The deep V in the front section let the Manta 61 and 71 fly over the chop smoothly and provide outstanding control.
- EXTRA TAIL V: An extra tail V on the Manta boosts acceleration and top speed.
- SPEED CONCAVE ON 71: Improved top speed and acceleration are guaranteed thanks to the new concave of the Manta 71.

MAGIC CARPET

FOIL CONVERTIBLE

If you want to enjoy foiling in all its facets and conditions, the Magic Carpet is your go-to board.

Every feature of this board is designed to provide equal performance, controllability and fun, when foiling with a windsurfing sail, a wing or an SUP paddle.

The compact outline provides control and maneuverability in the air, while a big mono pad and a large variety of different foot strap positions add comfort and grip. A flat tail with low entry rocker, a step tail and concave rails with high apex create better water release, which leads to incredibly early lift-offs.

The Magic Carpet is compatible with different types of foils thanks to the mounting of Deep Tuttle and Double US box systems.

Great lift, maneuverability and control, when foiling with a windsurfing sail, a wing or a paddle are made possible by just one single board - the Magic Carpet.

2023 FEATURES

- OUBLE US-BOX PLUS FOILBOX: A Double US and reinforced Deep Tuttle Foilbox allow you to use different types of foils.
- SUPER COMPACT OUTLINE: The compact outline makes controlling and maneuvering the Magic Carpet incredibly easy.
- FLAT TAIL WITH LOW ENTRY ROCKER: The bottom shape with a flat tail and low entry rocker provides extremely early lift-offs.
- BIG MONO PAD: A large EVA pad adds comfort and grip, especially when foiling strapless.
- MULTIPLE INSERT POSITIONS: A huge variety of foot strap insert positions provides different options for windsurf foiling, wingfoiling and SUP-foiling
- STEP TAIL AND CONCAVE RAIL WITH HIGH APEX: The elaborate rail shape and the step tail create better water release for early lift.
- CARRY HANDLE ON THE BOTTOM: A perfectly positioned carry handle on the bottom makes carrying the Magic Carpet together with the mounted foil super easy.

AIR RIDE

ALLROUND FOILING

Take off with ease and fly over the water surface at high speed with the Air Ride - the board of choice for dedicated foiling enthusiasts. An elaborate foiling rocker line makes you take off in incredibly light winds and enables soft touchdowns, which helps both novices to enjoy their first foiling experience and skilled riders to fully utilize the Air Ride's performance in the air. The wide tail outline adds extra leverage and provides early and easy take-offs together with the cut-outs. The Air Ride's deck features a constant curvature, which adds comfort in each of the many foot strap positions. This provides the perfect stance for foiling novices and also experts, who aim for maximum performance. The lightest breeze is enough to have an amazing foiling session with the Air Ride.

2023 FEATURES

- SPECIAL FOIL ROCKER:** The rocker of the Air Ride is specifically designed to provide early take-offs and soft touchdowns.
- WIDE TAIL OUTLINE:** Extra width in the tail adds leverage for even easier take-offs.
- CONSTANT CURVATURE DECK:** A constant curvature on the deck of the Air Ride provides comfort in any of the multiple strap positions.
- BIG CUT-OUTS:** Big cut-outs in the tail reduce the wetted surface, which results in massive lift.
- MULTIPLE STRAP INSERTS:** Various insert positions provide you with comfort and control at all skill levels.
- SUPER COMPACT OUTLINE:** A shorter outline on the 81 and 87 add even more control when flying.

AIR RIDE +

FOIL RACING PERFORMANCES

Maximum performance in all foil racing disciplines is guaranteed with the Air Ride Plus collection. With the Air Ride Plus 81 and 89 you'll be able to take-off early, accelerate to outstanding top speed and easily fly through jibes on slalom courses. The 81 is mainly designed for lighter riders and foil racing in high wind conditions, while the 89 version is the all-round choice for foil slalom racing. The shorter outline, reduced volume and lowered mast track of the 89 provide increased controllability and reactivity, which leads to higher top speed and effortless jibing characteristics. Thanks to the enlarged cut-outs the Air Ride Plus 89 still takes off easily and early in light winds to have a great start into every race. The Air Ride Plus 100 is dedicated to course racing with its inimitable upwind performance and incredible lift in extremely light winds. Make sure to fly over the finish line in first place with the Air Ride Plus.

2023 FEATURES

- COMPACT OUTLINE:** A shorter outline provides a lighter feeling and improved aerodynamics at full speed for outstanding maximum speed.
- REDUCED VOLUME SHAPE:** Reducing the volume of the 89 results in a more reactive feeling and increased maneuverability, which allows you to easily fly through jibes and find the perfect position in the racing line-up.
- BIG LIFT CUT-OUTS:** Enlarged cut-outs lead to early planing and great lift for quick acceleration on a straight line and after touchdowns.
- COMFORT AND CONTROL DECK SHAPE:** An elaborate deck shape on all sizes provides comfortable stances in different positions and for riders of different statures.
- LOWERED MAST TRACK:** The lowered mast track on the 89 and 100 results in enhanced control in all racing situations.
- CENTERED BACK FOOT ON 89:** A more centered position of the rear foot straps on the 89 leads to outstanding controllability and comfort on cross wind courses.
- NEW ALL-ROUND OUTLINE ON 89:** With the slightly reduced width of the Air Ride Plus 89 we achieved new levels of reactivity, while maintaining early lift-offs in light winds.

CROSS

NEW

FREERIDE ALLROUND WING

Next level all-round performance and versatility are guaranteed with the 2023 Cross, which allows you to enjoy wingfoiling in all its facets and a huge range of conditions.

A ton of innovative features were introduced including the brand-new interchangeable handle system, allowing you to quickly switch from the rigid handles supplied with the Cross to the extra soft handles in the same mounting framework.

An updated panel layout, enhanced LE stiffness and increased tension in the canopy provide outstanding control and easy handling in a big wind range.

The deeper profile in the front section still provides impressive low-end power due to the angled strut shape. This new strut design, including a rofile panel in the front, enables an ergonomic arm position, especially on upwind tacks.

The split windows on both sides of the strut provide great visibility and allow you to fold the Cross without creasing the windows.

The Cross will fascinate both novices and experienced riders with its unmatched mix of power, controllability and handling..

2023 FEATURES

- **INTERCHANGEABLE HANDLE SYSTEM:** Quickly switch from the rigid handles to the soft webbing handles to obtain your perfect individual setup.
- **DOUBLE LAYER LE CONSTRUCTION:** A second layer of Dacron in central leading edge segments increases stiffness for outstandingly direct handling.
- **ANGLED STRUT DESIGN:** The newly introduced angled strut provides the perfect mix of power and control as well as an ergonomic and comfortable arm position in all conditions.
- **NEW PANEL LAYOUT:** An updated panel layout with enhanced tension in the canopy provides maximum control as well as direct and easy handling.
- **DACRON FROM DIMENSION POLYANT:** The Dacron from the world's leading manufacturer of sailcloth leads to a super stiff and light leading edge and strut skeleton.
- **SPLIT WINDOW DESIGN:** Split windows on both sides of the strut offer great visibility and durability.
- **KEVLAR ABRASION PROTECTION:** Kevlar on the leading edge, strut and leading edge ends provide protection and durability.
- **ONE-PUMP VALVE AND EXTRA DEFLATION VALVE:** Clean connection and easy and quick inflation and deflation of the strut thanks to the new one-pump valve and extra deflation valve.
- **BLADDER FIXATION:** Bladders are fixed inside the leading edge and strut to prevent slipping and damage.

POISON

NEW

ALLROUND PERFORMANCE WING

Experience new levels of performance with the 2023 Poison's unmatched power, control and handling characteristics.

Tons of innovative features include the brand-new interchangeable handle system, allowing you to quickly switch from the rigid handles supplied with the Poison to the extra soft handles in the same mounting framework.

The radically angled strut shape provides outstanding power and direct handling as well as an ergonomic arm position in all conditions. Controllability and easy handling are guaranteed with the updated panel layout, enhanced LE stiffness and increased tension in the canopy.

The Poison flies exceptionally neutral, when flagged out, which enhances its wave riding potential and comfort together with the well-placed Neoprene protectors below the handle and its light-weight design.

If you look for maximum performance in a huge range of conditions, the Poison is exactly the right choice with its low-end power, control and direct handling.

2023 FEATURES

- **INTERCHANGEABLE HANDLE SYSTEM:** Quickly switch from the rigid handles to the soft webbing handles to obtain your perfect individual setup.
- **DOUBLE LAYER LE CONSTRUCTION:** A second layer of Dacron in the central leading edge segment increases stiffness for outstandingly direct handling.
- **ANGLED STRUT DESIGN:** The newly introduced radically angled strut provides the perfect mix of maximum power and control as well as an ergonomic and comfortable arm position in all conditions.
- **NEW PANEL LAYOUT:** An updated panel layout with enhanced tension in the canopy provides maximum control as well as direct and easy handling.
- **DACRON FROM DIMENSION POLYANT:** The Dacron from the world's leading manufacturer of sailcloth leads to a super stiff and light leading edge and strut skeleton.
- **MINIMALIST WINDOW DESIGN:** Small windows on both sides of the strut offer great visibility and durability.
- **KEVLAR ABRASION PROTECTION:** Kevlar on the leading edge, strut and leading edge ends provide protection and durability.
- **ONE-PUMP VALVE AND EXTRA DEFLATION VALVE:** Clean connection and easy and quick inflation and deflation of the strut thanks to the new one-pump valve and extra deflation valve.
- **BLADDER FIXATION:** Bladders are fixed inside the leading edge and strut to prevent slipping and damage.

POCKET AIR

COMPACT FOILING PERFORMANCE

The Pocket Air is the next step in the evolution of wingfoiling boards and equally provides newcomers and experienced riders with exactly the right board for their needs.

All sizes feature an extremely compact outline for maximum controllability and maneuverability as well as a single concave deck for outstanding comfort in each of the many foot strap positions or when riding strapless.

The 87 and bigger feature extra thickness in the top nose section adding stability to the compact shape, which makes the bigger sizes great oards for lighter winds.

A smooth curvature rocker with a flat section in the tail allows you to take off super early and buffers touchdowns together with the concave rail design.

With the addition of new sizes the Pocket Air collection includes easy to use boards for newcomers as well as high-performance shapes for racers, freestylers and wave riders.

Prepare for lift-off with one of the lightest and most innovative wingfoiling boards available.

2023 FEATURES

- THE RIGHT SIZE FOR YOU: A range of 8 sizes between 57 and 137 liters contains the right board for pros and beginners.
- SUPER COMPACT OUTLINE: Outstanding control and maneuverability when flying thanks to the shorter outline design.
- SMOOTH CURVATURE ROCKER: The smooth curvature rocker with a flat section in the tail provides early take-offs and soft touchdowns.
- WIDER TAIL TOP: A wider top outline in the tail section adds stability on the knee, while still providing early lift-offs due to the reduced wetted surface on the bottom.
- MULTIPLE STRAP INSERTS: Various insert positions provide you with comfort and control at all skill levels and in different stances.
- SINGLE DECK CONCAVE: The single concave on the deck maximizes comfort and control in all stances.
- CONCAVE RAIL: A concave shape in the rails combines great water release with smooth touchdowns
- ELABORATE VOLUME DISTRIBUTION: The Pocket Air 87 and bigger feature extra thickness in the top nose section to prevent nose diving and help balancing when starting on the knees.

TINY

NEW
RADICAL WINGFOILING

The brand-new Tiny with its super compact outline specializes on pure performance in prone foiling and winging - get ready to push your limits!

Three different sizes offer the perfect board for radical young rippers and experienced wingers and prone foil riders, who seek as little board below their feet as possible to achieve maximum agility and responsiveness for radical jumps, long pumping sessions and wave rides.

A sophisticated hull shape releases quickly from the water surface for early take-offs and buffers touchdowns to keep you in the air easily.

Once in the air the Tiny motivates you to carve, pump, jump and rotate with its super compact outline that provides immediate response from the foil and allows you to direct the board into any direction imaginable.

Redefine the limits of gravity and express your creativity in prone foiling and winging with the brand-new Tiny board range.

2023 FEATURES

- THE RIGHT SIZE FOR YOU: A range of 3 sizes between 26 and 46 liters contains the right board for any experienced riders.
- SUPER COMPACT OUTLINE: Outstanding control and maneuverability when flying thanks to the super compact outline design.
- ELABORATE HULL DESIGN: The sophisticated hull design provides early take-offs and soft touchdowns.
- ELABORATE VOLUME DISTRIBUTION: The volume of the Tiny is perfectly distributed to provide enough float for easy pumping, while maximizing agility and responsiveness due to the compact design.
- MULTIPLE STRAP INSERTS: Various insert positions provide you with comfort and control in different stances and conditions.
- CONCAVE RAIL: A concave shape in the rails combines great water release with smooth touchdowns.

NEW

iPOCKET

INFLATABLE WINGFOIL

Traveling with your wingfoiling board has never been as easy as it is now - the iPocket combines comfort and foiling efficiency with a convenient pack size.

Four different sizes from 5'0" to 6'0" provide riders of different skill levels and physiques with the perfect freeride wingfoiling platform that can easily be transported to the spot or your travel destination.

A strong and durable Fusion construction with drop stitch core and double layers on the rails enable stiffness and durability, which leads to comfort and great riding characteristics.

The integrated rigid Carbon plate placed below the rider's feet allows you to feel and steer the foil directly, maximizing comfort and foiling sensation.

The iPocket takes off early and provides stable flying characteristics as well as soft touchdowns for enjoyable wingfoiling sessions all around he world.

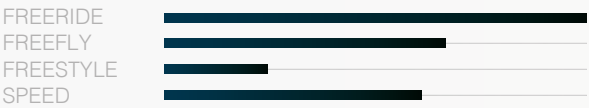

Take your wingfoiling board to new places and enjoy the sport to its fullest with the iPocket 2023.

2023 FEATURES

- THE RIGHT SIZE FOR YOU: A range of 4 sizes between 5'0" and 6'0" contains the right board for beginners and advanced riders.
- CARBON RIGIDITY PLATE: The Carbon plate on the bottom is placed below the rider's feet, which provides direct handling and feedback.
- INTEGRATED FOIL TRACK SYSTEM: The Double US Foil Track System is integrated into the Carbon plate, further enhancing responsiveness and durability.
- DROP STITCH FUSION CONSTRUCTION: The Drop Stitch Fusion and double layered rail construction of the iPocket leads to stiffness and urability.
- SOFT EVA PAD: Comfort and grip are provided by the soft EVA pad at the rider's foot position.
- READY TO GO PACKAGE: The iPocket is supplied with a practical bag and a pump so that you're ready to start your first trip right away.

HYDROFOILS WINGFOIL SETS

HYBRID

ALUMINIUM SET

The Hybrid Foil with Double US Plate adapter offers all-round performance and the freedom to customize the foil according to your individual requirements.

A smooth and extremely early take-off, control in the air and a lot of performance potential provide both novices and advanced foil riders with the right setup for their flight.

You can choose between an 82cm and 72cm CNC milled aluminum fuselage for either increased ease of use or higher performance and agility. Maximum maneuverability and pumping performance can be achieved by adding the 62cm or 67cm fuselage.

Depending on your setup the Hybrid Wing Foil Set allows you to cruise in almost non-existent winds, but also to race in extremely high-wind conditions.

The 85cm aluminum mast with incredible lightness and rigidity makes the Hybrid Foil a cost-efficient foil set with enormous performance potential.

MACH 1

CARBON SET

Lift your foiling to the next level with the premium Mach1 Wing Foil Set. If you are looking for prime performance, agility and a top-class construction in one package, the Mach1 is the right choice for you.

An incredibly stiff and light 90cm carbon mast is pre-set with an integrated Double US Plate adapter for enhanced rigidity at the connection point to your board.

The 72cm CNC milled aluminum fuselage provides great agility for freestyle moves, foiling in waves as well as pumpfoiling, which can be maximized by adding the 62cm or 67cm fuselage.

No matter if you're looking for maximum performance, lift or comfort, you can adjust the foil with a large assortment of tuning parts to achieve exactly the right setup for your demands and the conditions you're foiling in.

GTX **NEW**

CARBON SET

The GTX Wing Foil Set sets a new standard in wingfoiling performance.

A newly developed Carbon layup on this 97cm mast with a slimmer profile leads to increased stiffness, lightness and less drag, which results in outstanding speed, control and responsiveness.

The 72cm CNC milled aluminum fuselage provides great agility for freestyle moves, foiling in waves as well as pumpfoiling, which can be maximized by adding the 62cm or 67cm fuselage.

Combine the GTX Wing Foil Set with one of our HP front wings to achieve a great mix of stability, controllability and performance or go for maximum performance potential with our higher aspect MP front wing series.

You can adjust the foil with a large assortment of tuning parts to achieve exactly the right setup for your demands and the conditions you're foiling in.

FOIL WINGS

FREE WINGS

FREE RIDE

A selection of five different FREE front wings provides an incredibly comfortable and easy-to-use addition to our foil sets. Five sizes offer exactly the right front wing for each rider and foiling discipline. The FREE range fascinates with its ease of use, quality and controllability for riders of all skill levels without lacking agility and performance. All FREE front wings are compatible with the Hybrid, Mach1 and GTX foil sets.

HP WINGS

HIGH PERFORMANCES

Pair your GTX, Mach1 and Hybrid foil set with one of the four different HP front wings in order to achieve enhanced performance, speed potential and agility. The medium aspect ratio results in agile riding characteristics and allows you to push your wing and windsurf foiling to the next level. Despite the huge performance potential the HP front wings still offer great controllability and lift for riders, who just start pushing their level in foiling. A huge speed range, easy take-offs and a great balance of stability and agility make the HP outstanding all round front wings.

MP WINGS NEW

MAXIMUM PERFORMANCES

Reach new levels of wing-, pump- and pronefoiling performance with the brand-new MP front wing series. An increased aspect ratio leads to outstanding speed potential, glide and overall performance. Despite the fairly high aspect ratio the MP front wings offer great carving characteristics, stability and controllability. The longer root chord provides forward drive, while the low drag profile keeps the MP gliding easily. This is the perfect choice, if you seek speed, agility and glide in one package.

SPARK

NEW

PERFORMANCE FREERIDE

All-round performance and versatility in a huge range of conditions will spark your motivation to push your progression and go for bigger jumps. We completely redesigned the Spark and newly calculated its lift distribution leading to a more sportive behavior. A slightly wider but flatter wing tip reduces bar pressure and increases the Spark's turning speed, which leads to a very agile handling. In order to stabilize the tips during fast turns and small radius loops, the side strut was moved slightly towards the tip. The flatter leading edge bending curve design in the center improves the Spark's performance, especially on upwind tacks. With the addition of the Spark 15 LW and 17 LW you'll be able to utilize the stable flying characteristics, controllability, power and great hang time in a wider range of conditions. The Spark combines easy jumping, low bar pressure and control with power, great lift and sportive handling, which allows you to enjoy its outstanding versatility in a huge wind range.

2023 FEATURES

- **WIDER BUT FLATTER TIPS:** The introduction to wider and flatter tips leads to increased turning speed and lower bar pressure.
- **UPDATED LIFT DISTRIBUTION:** A newly calculated lift distribution provides a more sportive behavior.
- **FLATTER LEADING EDGE CENTER:** With a slightly flatter LE center performance and upwind capability is optimized.
- **REPOSITIONED SIDE STRUT:** Side struts were slightly moved towards the tip to stabilize during fast turns and small radius loops.
- **NEWLY INTRODUCED SIZES:** The Spark 15 LW and 17 LW transfer the Spark's characteristics into super light wind conditions.

ONE

NEW

LIGHTWIND FREERIDE / FOIL

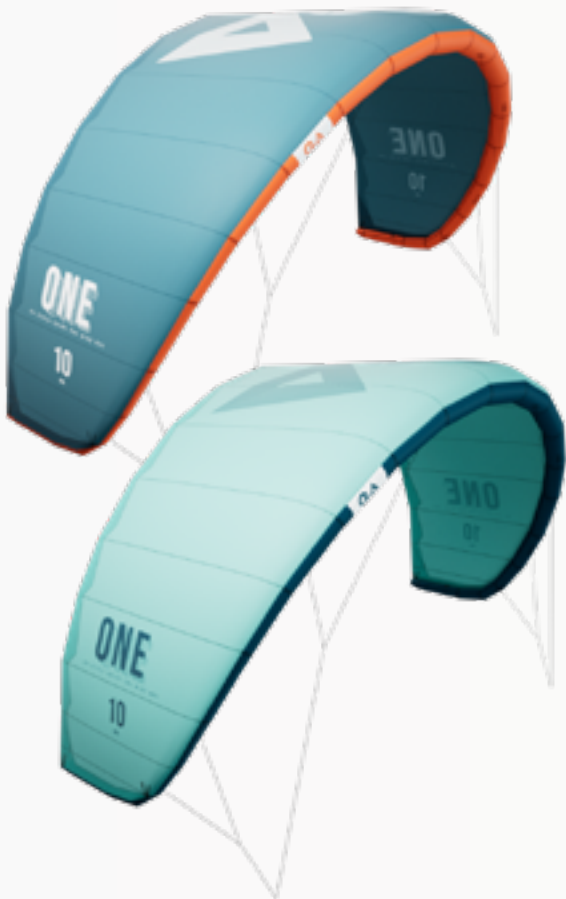

Not only performance at the extreme low-end is guaranteed with the One, which also provides incredible agility and controllability in stronger winds. A more boxy wing tip shape makes the handling smoother and more balanced, facilitates relaunching the One and leads to improved upwind performance. The dedicated light-wind profile with low drag wing tips provides a huge low-end without sacrificing control, when the wind picks up. This profile also further boosts the One's upwind abilities, especially in light wind conditions. The combination of the progressive profile-volume distribution over the wing span and its progressive arc leads to very agile and dynamic handling. Due to its lightweight construction the One is perfectly suited for foiling, especially in the smaller sizes. With its huge wind range the One allows you to enjoy your kiteboarding and kitefoiling session in marginal wind conditions, but also when the wind increases drastically.

2023 FEATURES

- **UPDATED WING TIP DESIGN:** A wider and more boxy wing tip shape leads to smooth and balanced handling, easier relaunch and enhanced upwind performance.
- **EXTREMELY LIGHTWEIGHT:** Due to its lightweight construction the One is very stable in extremely light winds, which makes it the perfect choice for kitefoiling.
- **LIGHT WIND PROFILE:** Specifically designed for light wind conditions, the One's profile and low drag wing tips provide outstanding low-end performance and upwind ability.
- **DYNAMIC PROFILE DISTRIBUTION:** Combining the progressive profile-volume distribution and progressive arc leads to very agile handling in light winds.
- **FOILING SIZES:** The smaller sizes transfer the One's easy and agile handling, control and low-end performance into kitefoiling.

BLEND

NEW

LIGHTWIND FREERIDE

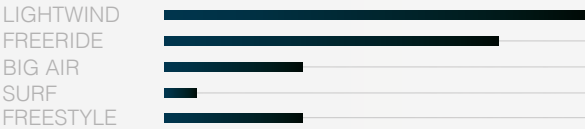

If you look for freeride performance in light wind conditions, the Blend will fascinate you with its unmatched mix of early planing and control. A relatively straight outline allows you to plane incredibly early, easily go upwind and control the board in a wide range of conditions. The mono concave shape maximizes upwind abilities in light winds and controllability in chop, which facilitates handling, when conditions becomes a bit rougher and you want load up power for big jumps. The triaxial glass construction with a wooden core leads to medium flex characteristics, which supplies the Blend with impressive pop and jumping performance. Still the Blend buffers landings softly and provides comfort, when enjoying an easygoing freeride session. The Blend allows you to utilize the lightest breeze for an exciting session without missing performance and control for big jumps.

2023 FEATURES

- **STRAIGHT OUTLINE DESIGN:** A relatively straight outline combines early planing, great control and upwind abilities.
- **MEDIUM FLEX:** Medium flex provides impressive jumping performance despite the bigger sizes.
- **MONO CONVAVE SHAPE:** The mono concave shape melds upwind performance in light winds and controllability in chop.
- **TRIAXIAL GLASS + PAULOWINA WOODCORE:** Premium construction with triaxial glass and a wooden core for durability and performance potential.
- **EASY TO USE PERFORMANCE:** The Blend makes jumps and freeride performance accessible in light wind conditions and to less experienced riders.

WATTS

NEW

ALLROUND PERFORMANCE

The Watts impresses with an inimitable mix of performance and user friendliness, which motivates you to push your limits, boost into huge jumps and learn freestyle moves. The mono concave design provides outstanding control in choppy conditions and allows you to go upwind with ease, even in light winds. A medium to soft flex, achieved by implementing a well-engineered triaxial glass and wooden core construction as well as softer tips, combines comfort in chop and also great jumping characteristics with smoothly buffered landings. A mix of control, planing capacity and performance potential define the Watts' all-round characteristics, which make big jumps and freestyle moves accessible to riders of different skill levels and in a huge wind range. No matter if you're working on your first jumps or want to improve your freestyle skills, the Watts offers impressive comfort and performance to boost your progression.

2023 FEATURES

- **MEDIUM TO SOFT FLEX:** Medium to soft flex provides comfort in choppy conditions as well as great jumping characteristics with smoothly buffered landings.
- **MONO CONVAVE SHAPE:** The mono concave shape melds upwind performance in light winds and controllability in chop.
- **TRIAXIAL GLASS + PAULOWINA WOODCORE:** Premium construction with triaxial glass and a wooden core for durability and performance potential
- **SOFT TIPS:** Softer tips lead to overall balanced flex and riding characteristics.
- **ALL-ROUND PERFORMANCE:** Due to the mix of control, comfort and upwind abilities the Watts enables performance in a huge range of conditions and riding disciplines.

NEW **PACT**
FREESTYLE / BIG AIR

The Pact returns to our collection for 2023 and delivers maximum performance for riders that expect nothing but outstanding pop, control and agility.

The well-engineered Twil Carbon construction combined with the Paulownia wood core leads to medium to hard flex characteristics, which maximize performance and optimize power transmission from the body to the board.

It also unlocks high levels of comfort and control in the toughest conditions, as the Pact simply cuts through chop.

Combining these traits enables you to load up power and boost into huge big air and freestyle moves. A double concave shape provides direct feedback to the water surface and torsional stiffness, which leads to increased pop.

Also landings become extremely easy and smooth with the double concave opening the water surface, which buffers and absorbs high forces.

Radical riding requires radical boards and the Pact is geared up to provide you with all the performance and control, you need for the highest big air and freestyle moves.

2023 FEATURES

MEDIUM TO HARD FLEX: Maximum performance, optimized power transmission as well as high levels of control and comfort are guaranteed with the medium to hard flex characteristics.

DOUBLE CONCAVE SHAPE: The double concave shape provides direct feedback and optimized torsional stiffness, which leads to outstanding pop and easy landings.

TWIL CARBON CONSTRUCTION COMBINES WITH PAULOWNIA WOOD: The well-engineered Twil Carbon construction combined with the Paulownia wood core offers sophisticated flex characteristics and outstanding performance potential.

SOFT TIPS: Softer tips lead to overall balanced flex and riding characteristics.

NO-COMPROMISE PERFORMANCE: The Pact allows riders with highest requirements to push their limits in freestyle and big air kiteboarding.

HARNESSES

VOLT PRO

WAIST MOULDED HARNESS

The VOLT PRO is our top of the line waist harness, brought to you in Double 3D! A revolution in itself, the shape combines ultimate support and all the freedom, you need, to move wherever the wind takes you.

The beauty of this harness unfolds in the way it forms around the body and ergonomically adapts to your back. An integrated EVA cushion gives maximum comfort.

SIZES: S - Waist 72 cm | M - Waist 77 cm | L - Waist 82 cm | XL - Waist 87 cm

RPP* : 279 €

PEAK CONVERTIBLE

SEAT HARNESS

The PEAK CONVERTIBLE combines the narrow profile and ergonomic 3D Design of the PEAK waist harness with the bonus of being able to convert it into a seat harness easily.

This allows you to enjoy the comfort, freedom and support of a waist harness with the control and performance of a seat harness, when you need it. No more need for two harnesses!

SIZES: S - Waist 71 cm | M - Waist 76 cm | L - Waist 81 cm | XL - Waist 86 cm

RPP* : 289 €

FORCE

SEAT HARNESS

Once you lock into the comfort of our seat harness, you will realize its benefits immediately. The FORCE is designed for all riders, from the novice to the pro racer. A medium high hook position combined with the multi strap system allows you to tune the harness to your demands.

Extra leg straps and a safety belt make sure the hook does not slide around. Ample padding and a grab handle make this the most comfortable seat harness out there.

SIZES: S - Waist 75 cm | M - Waist 80 cm | L - Waist 85 cm | XL - Waist 90 cm

WINDSURF BOARDS

GA START HD NEW

INITIATION

The Start HD is the one for all learner's solution with its perfect combination of performance, ease of use and durability.

A modern wide shape provides outstanding stability for your first steps and progression on a windsurfing board.

With an elongated outline the Start HD offers great glide and acceleration especially in lighter winds, which facilitate superb overall planing capabilities in combi-nation with the elaborate bottom contours that lead to easy control in choppy water conditions.

The heavy-duty built-in handles at the front and back of the board provide an ergonomic and comforta-ble carrying option as well as towing option for schools.

- Tough ABS Skin with Durable Rails bands protect board from damages.
- Elongated moderne shape combines manoeuvrability, control and glide.
- HD handles built into the nose and the tail.
- Supplied with 30cm fin and 62cm school daggerboard
- VDWS tested and approved design.

TABOU COOLRIDER

INITIATION

The Coolrider makes the sport of windsurfing accessible to more and more people by keeping the progression of beginners enjoyable and easy.

Despite the Coolrider's voluminous shape it can easily be navigated due to the double deck shape in the tail section.

Relatively thin rails additionally facilitate controllability and maneuverability during the first tacking and jibing attempts. The elaborate volume distribution provides stability to help beginners comfortably learn sail handling.

A large amount of different foot strap positions offers the right stance for every upcoming windsurfing enthusiast. Comfort, safety and stability are achieved by implementing an EVA deck, which makes the Coolrider the perfect choice for windsurfing schools together with other features like carry handles and rubber protectors.

Join the windsurfing family and enjoy the sport from day one with the Coolrider.

- EVA FOAM DECK: A soft EVA deck provides safety and comfort for beginners and schools.
- RUBBER PROTECTION: Extra rubber protection increases the Coolrider's durability.
- THIN RAIL DESIGN: Prime control and maneuverability thanks to the relatively thin rails.
- BIG VOLUME DESIGN: A lot of volume and width provide superb stability for your first steps on a windsurfing board.
- CARRY HANDLES: Handles at the nose facilitate carrying the Coolrider.

WINDSURF SAILS

GA FREETIME

INITIATION - KIDS

A perfect sail for schools and beginners making their first steps on a windsurfing board.

The Freetime's heavy-duty Dacron construction is pretty much bulletproof, so you don't have to worry about damages during the first challenging sessions.

Either 1, 3 or 4 battens, depending on the sail size, give the Freetime perfect balance of stability, weight and performance to make learning a breeze.

Being light, strong and functional, the Freetime will make you fall in love with Windsurfing from the first session on.

- EXTREMELY LIGHT CONSTRUCTION: An extremely light construction makes the Freetime the perfect choice for the whole family.
- ADJUSTED OUTLINE: Different sizes feature different outlines for the perfect ergonomics for riders of different sizes.
- HEAVY-DUTY CONSTRUCTION: The tough construction of the Freetime makes it perfectly suited for learners and schools.

GA FOXX

YOUNG GUNS

Kids looking for performance and maximum fun out there, will admire the Foxx.

This no-cam youth performance sail, designed around our Foxx masts, makes the young ripper feel like a pro.

Many of the specifications, currently featured in our Pilot and Matrix range have been adopted to get the best performance for the upcoming generation.

Kids deserve the correct tools to enjoy their passion and the Foxx definitely belongs in their quiver.

- EXTREMELY LIGHT CONSTRUCTION: An extremely light construction makes the Foxx the perfect choice for the whole family.
- HEAVY-DUTY CONSTRUCTION: The tough construction of the Foxx makes it perfectly suited for learners and and young guns.
- YOUNG GUN PERFORMANCE: The Foxx provides the upcoming generation of windsurfers with a performance-oriented tool to match their talent.

SUP BOARDS

GA TOUR HD NEW

STAND UP PADDLE

The Tour HD SUP board range is the perfect platform for your first steps onto a stand up paddling board and relaxed paddle sessions.

A super durable and robust construction makes the Tour HD resistant to damages and allows you to fully focus on your paddle session.

The classic all-round design in 10'0" and 11'0" provides outstanding stability, which makes this board a great choice for entry level riders, schools and centers.

A large EVA deck pad further protects the board from damages, but mainly provides comfort and safety.

The Tour HD SUP is a true all-rounder, which will spark your fascination for stand up paddling.

TABOU DA CRUISE NEW

STAND UP PADDLE

Explore the waters around you, discover new spots and enjoy your stand-up paddling session with the brand-new Da Cruise iSUP range.

A range of three different sizes provides the perfect shape and riding characteristics for riders of various skill levels and with different demands.

The 10'8" with its classic all-round shape and great stability is perfectly suited for your first stand-up paddling experience and easygoing cruising.

The more pinned outline of the 11'6" and 12'6" leads to increased glide and speed potential, which makes exploring new spots more convenient for intermediate and experienced riders, while never passing on comfort.

The 12'6" is also a great choice for workout sessions, downwinders and iSUP racing with its more performance-oriented shape.

Durability and stiffness are guaranteed with our Fusion construction with drop stitch core and double layers on the rails.

Enjoy every minute on the water and discover new spots around the world with the Da Cruise iSUP range.

- HD-CONSTRUCTION: Tough ABS Skin with durable rail bands protect the board from damages.
- ALL-ROUND SHAPE: The classic all-round shape in 10'0" and 11'0" combines stability, maneuverability and glide.
- LARGE EVA PAD: The EVA pad covers big sections of the Start HD's deck for increased comfort and safety.
- EASY ACCESS DESIGN: The Start HD is specifically designed to make stand up paddling easily accessible to newcomers.

- DROP STITCH FUSION CONSTRUCTION: The Drop Stitch Fusion and double layered rail construction of the Da Cruise leads to stiffness and durability.
- EASY CARRYING: Handles on the nose and tail make carrying the Da Cruise convenient for everybody.
- SOFT EVA PAD: Comfort and grip are provided by the soft EVA pad at the rider's foot position.
- READY TO GO PACKAGE: The Da Cruise is supplied with a practical bag, a 3-piece Aluminum paddle, a pump, a coiled leash and a repair kit so that you're ready to start your first trip right away.
- LUGGAGE NET: A net on the deck provides space for luggage during longer paddle sessions and explorations.
- MAST FOOT INSERT: An insert for a windsurfing mast foot allows you to learn windsurfing and cruise with a sail on light wind days.
